The safe battery

The integrated electronics protect the cell against overcharging, overload, short circuit and deep discharge. Thus, the battery is perfectly protected against incorrect handling, which guarantees a long service life.

The perfect replacement for batteries

The high-quality lithium-ion rechargeable battery from ANSMANN is the ideal replacement for disposable batteries, as the output voltage is higher than that of conventional NiMH rechargeable batteries (1.2 V). The integrated electronics regulate a stable voltage of approx. 1.5 V over the entire period of use and ensure that your end device is evenly supplied with energy. In addition, the battery can be used over a wide temperature range from -20°C to +60°C. Thus, the ANSMANN Li-Ion rechargeable battery is perfect for devices that are usually operated with disposable batteries, such as remote controls, digital cameras, toys, torches, headlamps, shavers, kitchen appliances such as milk frothers, wall clocks, alarm clocks, etc.

Easy charging via USB

Due to the integrated USB-C charging port, no additional chargers are necessary! The right USB cable is included in the delivery for each size. Each battery can be connected and charged simultaneously via the included cable. This guarantees safe and easy charging via all available USB charging options such as laptop, powerbank, USB charger for the wall socket or car or integrated USB chargers in the wall or car. The indicator on the positive pole of the battery flashes red during charging. As soon as the charge is complete, it lights up red permanently.

Note: Only charge the Li-Ion battery via the USB to USB-C cable supplied!

Low weight, low self-discharge and high cycle stability

The ANSMANN Mignon AA Li-Ion battery is extremely durable and can be recharged up to 1200 times even under tough conditions. Due to the very low self-discharge, the battery keeps its energy for a long time even when not in use. In addition, the weight of the Li-Ion cell is much lower compared to conventional battery technologies (e.g. NiCD/NiMH/PB) with the same performance.

The functions at a glance:

- High-quality ANSMANN lithium battery Mignon AA with protective circuitry
- Stable voltage of 1.5 V over the entire period of use
- Ideal for use in remote controls, digital cameras, toys, torches, headlamps, shavers, kitchen appliances such as milk frothers, wall clocks, alarm clocks, etc.
- Integrated protective circuit protects against overcharging, overload, short circuit and deep discharge
- Max. Continuous discharge current: 2 A
- Very low self-discharge and high energy efficiency
- Excellent price-performance ratio

Content of delivery: 4x Mignon AA Li-Ion rechargeable batteries 2000 mAh, 4 in 1 USB-C charging cable
