Beschrijving

The high-quality USB-C to USB-C charging cable is the ideal companion for all devices with high power requirements up to 140 Watts! The built-in eMark chip is compatible with the Power Delivery protocol for currents up to 5A and max. 140 Watts. The high-quality cable with textile sheathing and all-metal plugs made of zinc alloy serve to improve heat dissipation.

The cable is ideal for Apple MacBooks and all other laptops with USB-C power input. The 200 cm length is convenient for desktop or sofa use.

An LED display integrated into the plug provides information about the current power consumption. Of course, the charging cable is compatible with all USB-C devices, so smartphones and tablets can also be charged with it
