### Overview

The biggest reason for its creation is to support the **top** PCIe to M2 NVME shield. Apart from this, even if you don't have a PCIe to M2 NVME board now, it is also compatible with Raspberry Pi 5 and [raspberrypi 5 official cooler](#) and other [Geekworm cooler](#), but a PCIe to M2 NVME shields like [X1000](#), [X1001](#) or [X1002](#) or [X1003](#) or [X1004](#) or [X1015](#) is recommended.

The P579 is not only suitable for Geekworm PCIe to NVME series boards, but also compatible with third-party PCIe to NVME boards. The unique cut-out design on the front of the case also meets the LED display requirements of most third-party PCIe to NVME boards, and the only thing you need to pay attention to is the height of the copper spcer used by third-party PCIe to NVME boards, which is no more than 17mm in height.

But please note: since [X1002](#) is a bottom PCIe to M2 NVME shield, so P579 case is not compatible with it, but you can look forward to our [P580](#) case, which is specially designed for [X1002](#).

### The difference between P579-V2 and P579:

The **P579-V2** is just 5mm taller than the **P579**, there will be more space between the top cover and the NVME board which is helpful for some specific thicker NVME SSDs for mounting an SSD cooler, and the P579-V2 is also compatible with the **X1004** shield but the P579 is not.

**Note:** P579 is no longer in production, all shipments are P579-V2.

### Features:

- Model: P579, P579-V2, P579-V3
- Compatible with Raspberry Pi 5
- Compatible with Raspberry Pi 5 official active cooler
- Compatible with X1000/X1001/X1015/X1003/M901/M300/M400
- Easy to install, excellent heat dissipation

### Packing List

- 1x Metal case P579
- 4x M2.5x5+5mm spacers
- 4x M2.5x6Ø4mm copper nuts
- 4x KM2.5x4mm screws
- 1x 4pcs rubber pads

### Productinformatie

Artikelnummer	RBP5P579
Merk	GEEKWORM
Is on Sale	Nee
