

PARALYZZER 15000V BOUWPAKKET

€ 39,95

Excl. BTW: € 33,02

Afbeeldingen

Beschrijving

Produces high-voltage sparks of more than 15,000 V from a 9 V battery, which may even penetrate through cloth. Ideal as self-defence against wild animals, etc. or for physical experiments. The possession as a weapon is prohibited in many countries (e.g. in the EU). A deterrent effect is already achieved through the sparks flashing over and the sparking crackle!

Technical Data

Kit To solder yourself

Operating voltage 9 V alkaline block battery

Current consumption temporary (keystroke) 100 - 200 mA

Output voltage (spark) > 15.000 V

Frequency of sparks 1 spark per keystroke, spark sequence: may be released every 2 seconds at maximum

Board size approx. 64 x 68 mm

Productinformatie

Artikelnummer	B181N
Merk	KEMO
Is on Sale	Nee
