The Oyster Vision is a universal satellite system which should really be Oyster Europe! Europe uses individual country-specific encrypted programmes which many different encoding technologies cannot manage. With its proven and sturdy design and well-known reception range benefits, the Oyster Vision is equipped with a special control unit that works with all popular receivers in Europe.

Whether you take your trusted receiver from home with you on your journey, or connect a digital or analogue receiver of your choice, the satellite search is always done digitally.

The control unit

With this fully automatic control centre, your mobile home will be packed full with intelligent software. With the push of a button, the antenna moves into the last reception position (LEM). If it cannot receive any picture there, immediately the fully automatic search function starts.

The back-lit display informs you about all functions in the selectable languages of D, GB, F, NL, I, E, and S.

Features

- Dependable fast pivoting head technology
- Weather resistant construction
- User-friendly controller
- Compatible with all European receivers
- Automatic dish retraction when engine started

With the introduction of the new Vision, we are offering the easiest way possible to stay in touch with what is happening around the globe. This receiver-independent system gives you everything from the UK whilst you are away at the touch of a button.

With its unique user friendly control unit all you do is:

Turn on your Television.

Turn on your Receiver (available separately).

Turn on your Oyster.

A new concept in automatic satellite reception, the small, easy to use control panel can be mounted in any vehicle, inside a cupboard or out - it's up to you. Follow the 1-2-3 instructions and that's as simple as it is!

The Oyster will automatically seek and lock onto the correct satellite for your receiver (DVB-compatible, i.e Digibox for British TV) all you do then is watch your favourite programmes.

Performance features Oyster

- 65 cm or 85 cm dishes for range
- Digital satellite search
- Receiver-independent with user-friendly control unit for 12/24 V operation
- All popular digital and analogue receivers can be used for satellite search (Europe). Even receivers integrated in TV sets as well as provider-specific digital boxes can be used!
- LEM technology: search time reduction (antenna searches in the angle of inclination that was set the last time)
- Automatic closing at vehicle start
- Complete electronics of the system integrated in unique hide-away box.
- Made in Germany with high-quality craftsmanship and durable materials
