#### **Features**

- Ceramic PTC Thermistors provide overcurrent protection for single-phase motors, transformers etc. as well as electronic circuits (subscriber line interface cards)
- The ceramic PTC resistor contrary to PTC's are polymer-based and after repeated cooling returns to its initial resistance value
- By responding to inadmissibly high currents and protecting pre-selected temperature limits which have been exceeded; the thermal dissipation from the complete power circuit is limited, as the increased resistance of the current is reduced to a harmless residual value
- The PTC resistor must not be exchanged after the maximum temperature has been exceeded, as after a short cooling period, the protective function immediately takes over
- Overcurrent and short-current protection
- · Leaded discs coated
- Pitch 5,08mm
