Beschrijving

L4800 series devices are voltage regulators with a very low voltage drop (typically 0.4V at full rated current), output current up to 400mA, low quiescent current and comprehensive on-chip protection. These devices are protected against load dump and field decay transients of $\pm 60V$, polarity reversal and overheating. A foldback current limiter protects against load short circuits. Available in 5V, 8.5V, 9.2V, 10V and 12V versions (all $\pm 4\%$, $T_I = 25^\circ C$) these regulators are designed for automotive, industrial and consumer applications where low consumption is particularly important.

DC Input Voltage 35V max.
