Beschrijving

The PiRack is an expansion board allowing the connection of multiple IO boards to the Raspberry Pi. With the Ability to connect up to 4 additional boards, the plug-in PiRack allows users ultimate flexibility in their Raspberry Pi programming.

Powered separately to the Raspberry Pi means that the PiRack will not effect performance. Bytaking IO expansion boards directly off the Raspberry Pi, PiRack enables the camera module to easily connect onto the Raspberry Pi using the top mount CSI interface.

This board is ideal for educational purposes with the ability to work with multiple boards and allow users to create projects from beginners to advanced projects.
