Beschrijving

For cleaning and tinning of soldering iron tips in a single operation. Sweep the soldering tip over the surface of TIPPY, turning it gently. The soldering tip temperature should lie between 250°C and 450°C. The cleaning and tinning improves as the temperature increases. Finally, wipe the tip clean with a moist sponge. TIPPY is suitable for lead-containing solders, while TIPPY-ECOLOY can be used with both lead-free and lead-containing solders.

Productinformatie

Artikelnummer	TIPPY-ECO
Merk	STANNOL
Is on Sale	Nee
