The World' s First

The Atlas LCR is an advanced instrument that greatly simplifies the testing of passive components. Traditional LCR bridges are inherently complex and very time consuming to use. The Atlas LCR does everything automatically, it tells you the component type in addition to component value data. What' s more, the Atlas LCR automatically selects the best signal level and frequency for the particular component under test.

It doesn' t get any easier than this

Just clip the universal test leads to your component and press the test button. In seconds, the Atlas LCR will identify the type of component (Inductor, Capacitor or Resistor) together with the component' s main value. Additionally, further component data is also displayed, such as the DC resistance of an inductor. The test frequency is automatically selected to suit the component under test and this is also confirmed on the scrollable display.

Supplied complete with battery and new 2mm compatible hook probes

Flexible

The Atlas LCR is supplied with our new 2mm compatible detachable micro-hooks, allowing the use of a range of 2mm compatible probes.

Artikelnummer	LCR40
Merk	PEAK
Is on Sale	Nee
