While playing your records and even during storage of records, air pollution from outside (car exhaust, dust) and even

from inside the house like smoking cigarettes, cooking fumes causes a tough film to develop on your records. This film is hard to clean and cannot be cleaned with a record brush only. The stylus, while playing back, will scrape part of the residue which will gather around the stylus tip, causing distortion in playback or even skipping out of the groove. To avoid this clean your records at least once a year thoroughly. This can be done with a record washing machine.

There are many models on the market, but the most affordable yet very efficient model is the TonarKnosti Disco Antistat. By washing your records with this machine you are able to clean not only the pollution as mentioned before, but also the remains of the former Lenco Clean fluid which was used in the past to playback records "wet". This fluid left a crystalized residue in the groove which was almost impossible to remove and so the records after that could only be played "wet", but now the Tonar Disco Antistat also does an excellent job to remove these crystals. At the same time the TonarKnosti Fluid reduces the build-up of static electricity on the records.

Suitable for all sizes of **vinyl records** with diameters of 7 inch, 10 inch and 12 inch. **Careful!** Never use TonarKnosti Fluid or Tonar QS fluid to clean **78 RPM shellac records**. The alcohol type used in our fluids can permanently damage or destroy shellac.
