

MULTIFUNCTIONELE BATTERIJLADER LI-ION/NIMH/NICD 4 VOUDIG

€ 59,96

Excl. BTW: € 49,55

Afbeeldingen

Beschrijving

- Charging and discharging of NiCd, NiMH or 3.6V - 3.7V Lithium ion batteries.
- Optimizing and determining the maximal capacity of the batteries
- Each battery slot has its own display to show the charging current, battery voltage, capacity, internal resistance and charging time.
- The charging current is selectable for each slot individually and can be selected from 200mA, 300mA, 500mA, 700mA and 1000mA (and when only slots 1 and 4 are being used, also 1500mA and 2000mA).
- Discharging current for NiMH/NiCd batteries is 700mA, even if 1000mA is selected.
- Discharging current for Li-ion batteries is 200mA, 300mA, 500mA, 700mA or 1000mA
- 4 smart charging slots, that function independently from each other.
- Charges simultaneously different batteries of different type, size and capacity.
- Trickle charging of NiMH/NiCd batteries. With Li-ion batteries charging will time-phased.
- Temperature monitoring with automatic fans, to protect the charger and the batteries from over-heating.

(Geleverd exclusief batterijen)
