### Beschrijving

The best selling Ledlenser P3 has now been updated to the NEW Ledlenser P3 Core, which is now capable of 90 lumens output and features a different look and feel in line with the new CORE series.

The Advanced Focus System allows you to focus the light from spot to flood by sliding the head of the torch forwards and backwards, with the beam reaching a maximum of 110 metres when focused into a spot.

One AAA alkaline battery powers the torch and is fitted by unscrewing the tail end, inserting the battery into the torch positive end first and the tail switch can then be screwed back on as tight as it will go to ensure a good connection.

A full press of the tail switch will turn the light on and off, and if done quickly will cycle the brightness levels. The brightness level can also be selected with the torch off by softly pressing the tail switch in quick succession to cycle through high, mid, low and fully pressing the button in to select the desired output.

The P3 Core is supplied with a fitted pocket clip and one AAA alkaline battery.

#### Operational Modes

Low Power: 15 lumens; 6 hours run-time; 40 m beam range  
Mid Power: 50 lumens; 4 hours run-time; 70 m beam range  
Power: 90 lumens; 3 hours run-time; 110 m beam range
