Circuit principle

- Using single-chip microcomputer as the main control, use DS1302 travel time chip to provide accurate travel time clock source, combined with digital tube And LED lights show specific time values. Combined with the temperature light intensity detecting element, it can achieve the brightness adjustment and temperature check attached Test function. The control button of the single chip is combined with the necessary key input adjustment function, and the clock sound is processed by the single chip and then beep.

Beschrijving

Zelfbouwkit

Digitale klok/wekker

Tijd weergave

60 leds voor seconde

Temperatuur weergave

Transparante behuizing.

Productinformatie

Artikelnummer	EKO34
Merk	Brand
