

## MULTIFUNCTIONELE LI-ION/LI-PO/NIMH BATTERIJLADER

**€ 27,95**

Excl. BTW: € 23,10

### Afbeeldingen

### Beschrijving

The ingenious design of the Powerline Vario X makes it possible to charge almost all Li-Ion battery packs and Li-Po battery packs.

No matter if battery pack for digital camera or camcorder, the sliding contacts can be varied accordingly and make the Powerline Vario an all-rounder. Alternatively, it is possible to charge classic NiMH round cell batteries of the sizes Micro AAA and Mignon AA in pairs. This is an enormous advantage when travelling, as only one device is needed for all batteries. Suitable for 3.6 V / 3.7 V or 7.2 / 7.4 V battery packs or 2x 1.2 V NiMH round cells

#### Indispensable Features

The voltage and polarity of lithium battery packs are automatically detected. This prevents reverse polarity, short-circuiting or incorrect insertion of the batteries. After contacting the battery pack, microcontroller-controlled charging begins automatically. With NiMH rechargeable batteries, the switchover to pulse conservation charging is made after the end of charging, so that the batteries are kept fresh and ready for use at all times.

#### LC display

The LCD informs about the charging status in 25% steps. This makes it possible to see at any time how far the charging process has progressed.

Individually applicable

The Powerline Vario X is very compact and therefore offers a further advantage for use on the road. Thanks to its USB connection, it can be used with any USB power supply with at least 1A output current, whether at home or in the car. Alternatively, the Powerline Vario X can also be operated on a Powerbank.

## Productinformatie

---

Artikelnummer	1001-0085
Merk	ANSMANN
Is on Sale	Nee
